

## **Introduction for Teachers**

The principles in God's Word are timeless. They always apply no matter what the calendar or map says. God's way of life worked for Adam and Eve, the early church, believers in the dark ages, and for men traveling to the moon. They also apply in any culture. However, as technology takes off, lessons set in an agrarian society can seem a little removed. Teachers of the youth of today continue to search for ways to present the ageless Biblical truths in engaging current applications. The delivery of Bible lessons competes with television, arcade games, and the Internet. But Solomon was correct. There is nothing new under the sun. Biblical truths are just as practical now as they have ever been.

The computer continues to be more and more a part of our daily lives and school requirements. You won't find a reference in the concordance to a "computer", but you will find principles in the Bible that are demonstrated in computers. Because kids are "into" computers, attracting their attention to spiritual things by using computers as applications is advantageous. Do you remember the leaders of youth groups using object lessons, chalk talks, puppets and even slight of hand to get students to first take a look? In this technological age, the computer is as common a denominator as sheep and shepherds were for David or Jesus.

The lessons included in this manual are designed as enrichment and motivational tools to help get students into the scriptures. Once they have started on the narrow path, getting to know their Abba Father will continue to finish their faith, but they have to start somewhere.

If you are using curriculum materials that seem to need a little something more for the kids in your class, look over the topics in the CompuVerse© curriculum. Find a topic that compliments your regular lesson, and work it in. Individualize it for your students and watch them take off. ☺
